Until There's a Cure... We Will Lead the Fight. We're Armed with Breast MRI.

Diagnostic Imaging Associates Expertise

DIA has extensive experience in all facets of breast imaging and MRI. DIA Board-Certified Radiologists, Technologists, and specialized equipment offer state-of-the-art MRI exams. By correlating the patient's Breast MRI with other studies including Ultrasound and Mammography, we are able to provide the most accurate diagnosis. The goal of this advanced technology is to allow detection of new breast cancers at earlier stages and enhance the management and care of our patients. DIA's vision is that each woman receives informed and experienced care, with the purpose of better health and quality-of-life.

Diagnostic Imaging Associates' seven locations through Delaware provide state-of-the-art technology and full-service medical imaging services.

One Visit. One Examination.

While DIA has been one of the only facilities in the region providing MRI of the breast for a number of years, a recent upgrade to GE's VIBRANT software has allowed for significantly improved resolution and faster scanning for bilateral breast exams. Contrary to past procedures when the patient required two exams, two injections of contrast, on two separate days – DIA now provides patients with high-definition bilateral breast imaging in *one patient visit – in one examination.*

Quality Service and Cutting Edge Technology You Can Trust

- We are committed to the highest standard of patient care
- We will always provide you and your physician "radiology with today's technology"
- We have radiologists on-site at every location
- We fax reports to your referring physician within 24-48 hours of your visit
